## We're on the Track

Grade 2 Newsletter, 2020-2021

**"Being consistent transforms average into excellence!"**

We are waiting to share another incredible month of the learning experiences in our journey of grade-2 at Al Ain Juniors. These incredible achievements were possible by only being consistent with our efforts. Hope this consistency transforms average into excellence very soon. The heights to reach shooting stars are not very far!

We are glad with our experiences that we had, but by the wink of our eyes, it's our ETA now! I know, that all your eyeballs are rolling up high above to touch the sky. But, hold your horses.. For us grade-2 " Our learners are Twinkling Twinklers", They say, it's just a piece of cake for them! Haha... Would you all like to know the secret of this? Shsh... Yes, here comes the minute to let the cat out of the bag! it's all that matter is not what they learnt, it's all the matter on how they learnt.

The beautiful thing about learning is that no one can take it away from you.

B.B. King

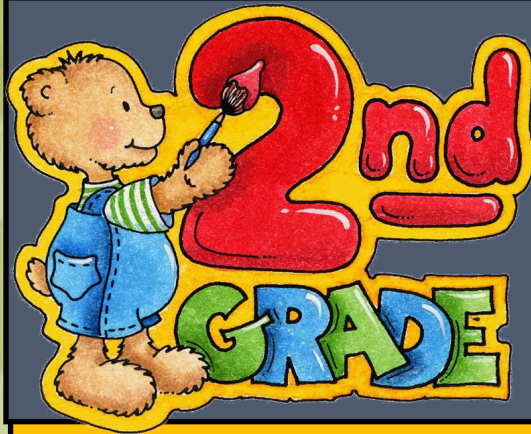

# ENGLISH

As they were in the world of imagination, in the process of becoming the Story Makers they were provided with opportunities to explore the elements of fiction. They were not only left with a world of dreams, They were also taped to wake up to explore the world of Non fiction too. Hurrah! Now they are able to relate that Science and Math are also non fiction !They discovered, They learnt, and it's our success to celebrate.

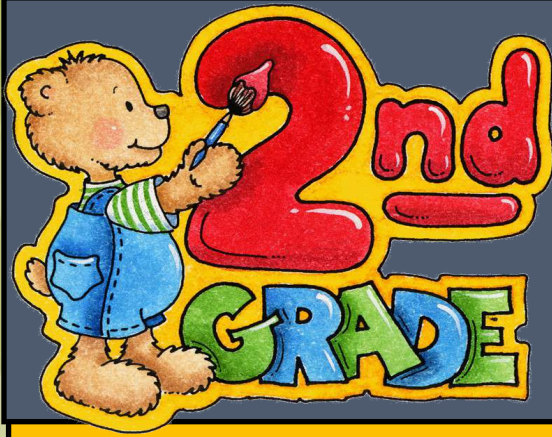

This paves way for them to be a independent lifelong learners. They are also enhancing their listening, reading and speaking skills using **RAZ** kids effectively. They are enjoying the process as it caters to the individual needs of every learner. The project given to be a vlogger of the day had inculcated the interest to be real Vloggers has been a platform to bring out the hidden talents which has made them flutter with different thoughts.

“Nothing is impossible for our 21st century learners”. We provided an opportunity for our learners to understand that the only way to learn Mathematics is to do Mathematics. Math cannot be taught but it can be Learnt. Our learners were able to realize this when they get to work with the checklist, poem, CUBES strategies, flipped classroom and many more!

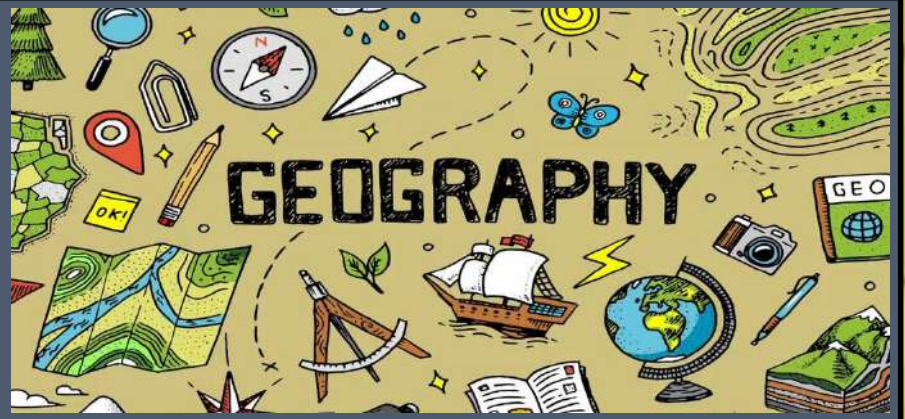

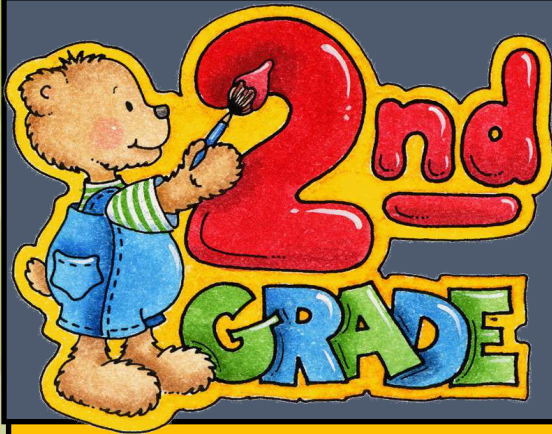

The way that they enjoyed their independent learning made us to be over the moon and be as powerful educators who can mark the difference in their learning. Usage of these strategies enhance our AI Agnates to be smart to crack the critical thinking questions which makes them be confident and feel easy with numbers. As they enjoy, they ask more! As they ask more, the learning never ends! As this beautiful saying follows “ Develop a passion for learning, If you do it you will never cease to grow!

It is a great success that our little scientists were made curious to find what is inside a seed, to find out

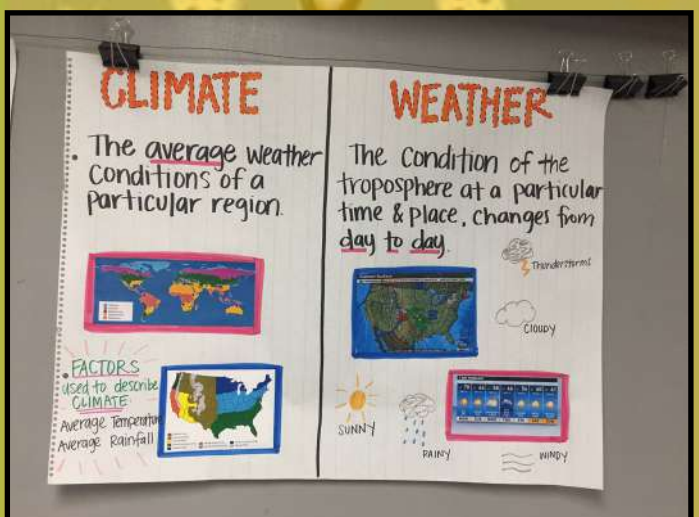

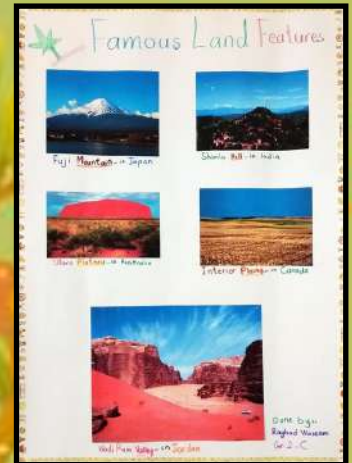

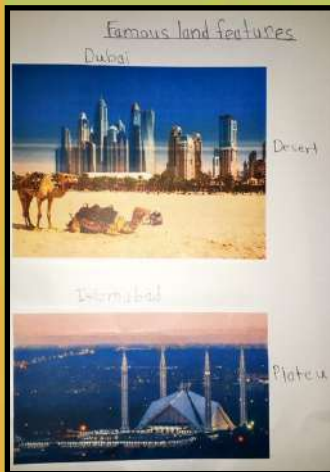

what happens when you pour water or acid to the rock. The curiosity in them made them explore and investigate these questions to arrive at the investigation cycle. The learners were able to perform hands on and present their observations. The learners were also able bring out their understanding on the transportation of water in plants, formation of different types of rocks through illustrations which shows the attainment of Zone of Proximal Development.

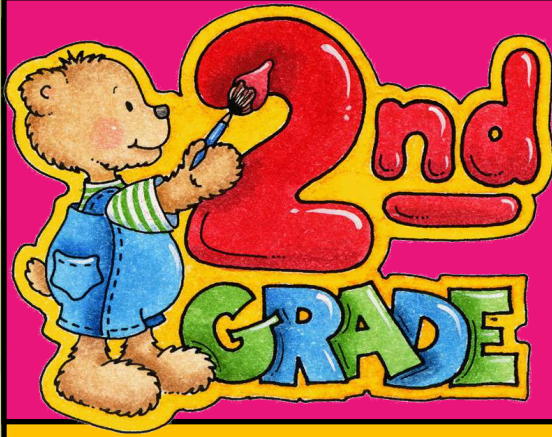

We challenged learners to get to explore more about Earth. Our learners analyzed the water cycle which get them to identify different sources of water. Also, they presented through illustrations the different uses of water. They were able to differentiate between weather and climate. They were also able to assume the temperature in relation to the weather.

Let's pause.. I know.. you all want a sip of water. Yes! It's an amazing journey. We got to enjoy their journey as Explorers, Communicators, Collaborators also Creators. Though these aspects are blended with the curriculum we also wanted to give them the opportunity to work with their fine motors also to learn the tricks to be high with creative techniques.

# Clubs/Activities

## It's time to celebrate!

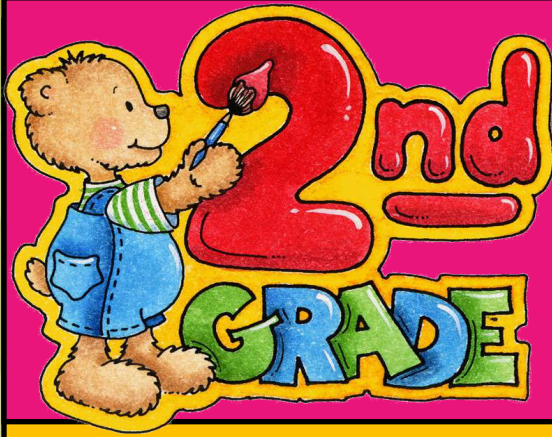

There were lot of creative club activities organized as it is the month of all pride “ UAE 50<sup>th</sup> Flag Day”

We also make our learners a responsible individual of the country. They understood the pride of being in the most treasurable country and celebrated the occasion with all pride embracing the culture and the community. They also demonstrate modesty by dressing appropriately for the occasion.

On behalf of Al Ainates “ A Very Happy National Day” to everyone.

Hope you were able to visualize our story of success for this month. Days are not enough to explain our success story!

# Clubs/Activities

## ANTI-BULLYING

Bullying is unwanted, aggressive behavior among school aged children that involves a real or perceived power imbalance.

Parents, school staff, and other adults in the community can help kids prevent bullying by talking about it, building a safe school environment, and creating a community-wide bullying prevention strategy.

Teaching children the value of being kind, giving without expecting anything in return, and helping each other is important
